Installing the 3CX client for Android Phones

The 3CX client for Android allows you to make and receive office calls on an Android device directly from your office extension at no additional cost. The 3CX client for Android possesses a user-friendly interface allowing the transfer of calls, the creation of conference calls, and the ability to view the status of colleagues and control your own status from wherever you are.

There's no need to give out your personal mobile number anymore either!

1. Go to Google Play Store, and search for **"3CX"**
2. Tap **"Install"** and **"Accept"** for the application rights. The 3CX client for Android will be downloaded and the installation procedure will begin.
3. Once the installation is completed you will have to **"Agree"** with the License Agreement.
4. A message will appear confirming that your 3CX client for Android has been installed.
5. On your desktop PC in Outlook go to your **"Welcome to CoC 3CX Phone System"** email and open the **"qr.png"** attached image. The image will look like the example below. If you do not have your welcome email then you can submit an IT HelpDesk request to get it resent to you.

6. Open the 3CX client on your Android device, go to **"More> QR Provisioning"** scan the QR code from your computer screen and the 3CX app on your phone will be automatically configured.
7. Once configuration is complete, you will see the Available status in the dial screen and On Hook in the right upper corner. You can now start making calls.
