

TIER 3 PUBLIC NOTICE

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Monitoring Requirements Not Met for Cottonwood Municipal Water VV6

The City of Cottonwood is required to monitor your drinking water for specific contaminants on a regular basis. The results of regular monitoring are an indicator of whether or not the drinking water meets health standards.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During 2nd Qtr. 2021 only 4 out of the required 5 samples for chlorine residual was reported. Even though this was not an emergency you have the right, as our customer, to know what happened and what we did to correct this situation.

What should I do?

There is nothing you need to do at this time.

The table below lists the contaminant the city did not properly test for; the required sampling frequency, the number of samples actually taken, the month/quarter the samples should have been taken, and when the samples were taken.

Contaminant	Required sampling frequency	Number of samples taken	When samples should have been taken	When samples were taken
Chlorine Residual	5 samples per month every quarter	4	Only 4 of the 5 samples were taken in May 2021	Samples were taken in June 2021

What is being done?

The operators that conduct the sampling received a corrective action report and were retrained on the proper sampling procedures and data documentation.

For more information, please contact Tom Whitmer at 928-340-2737 or via email at twhitmer@cottonwoodaz.gov.

Please share this information with other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
